does hurd kernel include c++ ?

No, the GNU Hurd kernel and its underlying Mach microkernel are **written in C**, not C++. [1, 2]

- **Language Foundation:** The core codebase of GNU Hurd and GNU Mach is implemented in C. [1, 2]
- **System Libraries:** While user-space programs and libraries running on top of Hurd (such as the GNU C Library, glibc) can be used by C++ applications, the kernel itself does not include or require C++. [1, 2, 3]

Would you like to know more about the **microkernel architecture** of GNU Hurd or how it compares to monolithic kernels like Linux?
